MALAVTILIN

is a high performance
parapharmaceutical and
cosmetic remedy
for external application.

Composition: purified water, olive oil, eftiderm, castor oil, emulsive wax, glycerin monostearate, malavit, calendula tincture, eleuterococca extract, liquid aromatizer, natrium benzoate.

Eftiderm is a resolvent. Eftiderm joins all the active components of Malavtilin and easily transports them to the tissue, thus increasing their medicinal effect a number of times. Apart from that, it is an anti-oxidant. It improves the cell viability, influencing the fermentative systems of biological membranes. As a result, we have apparent influence upon all the deep-seated structures. It enhances the anti-inflammatory, anti-edematous, antiseptic and analgetic action of the composition.

Malavit is a high performance parapharmaceutical and cosmetic remedy for external application, including micoids of ENT-organs and genitals, with its powerful antiseptic and antibacterial action practically upon all the types of aerobic and anaerobic infections, with apparent antiviral, anti-fungal, analgetic and deodorant action.

It's the synthesis product of bioenergetics informational medicine, pharmacology, and homoeopathy, with unique gifts of the Altai nature. It comprises: active complexes of copper, including malachite mineral; lactic and other acids; ant spirit; silver; salts of sodium, calcium, potassium, lithium, etc.; beekeeping products; sugars; traditional mumie and white mumie (stone oil); larch gum and cedar resin; birch and pine-tree buds; oak bark; extracts of roots and herbs of the Altai region (peony shrinking, milfoil, sage herb, immortelle, mint, calendula, camomile, eucalyptus, marsh flagroot, thyme, aconite, etc. all in all 37 components with the usage of the structured spring water without dyes.

The clinical trials of Malavtilin were conducted in scientific and patient care institutions of Moscow, St. Petersburg, Yekaterinburg, Perm, Izhevsk, Omsk, Tomsk, Chelyabinsk, and other cities.

The antiseptic properties of the remedy were tested by the main antibiotic-steady test cultures of microorganisms. It is proved that the remedy suppresses the growth of blue pus bacillus, colon bacillus, and diphtheria bacillus, golden staphylococcus, A & B streptococcus, cyto bacter, salmonella, shigell of dysentery, fungus like candid. It has been proved that it has a viricidal action on the virus of simple herpes, vesicular stomatitis.

Indications and application method

Recommended in case of suppurative acute and chronic otitis media, chronic tonsillitis, quinsy, antritis, sinusitis. The practice has shown its high effectiveness, being equal to famous analogues.

Application method: cream onto the skin and mucous membranes in the localization area (or above this area) 1-2 times a day during 7-10 days.

The remedy is highly effective in the treatment of respiratory diseases and influenza. Cream Malavtilin onto the wings of nose 2-3 times a day, in case of associated headaches onto the temples.

It removes pain, edema; reconstructs the tissue functions in case of neuritis, neuralgias, muscle and joint pains (arthritis, bursitis, epicondylitis, tendovaginitis, osteochondrosis, etc.)

- Malavtilin effectively clears the skin from blackheads, furunculosis, herpes of any localization.

- Malavtilin has proved its effectiveness in obstetric-gynecologic practice. Good results are achieved in the treatment of vulvovaginitis (75-90% of recovery), colpitis, adnexitis, cervical erosion, and others. The application method: alongside with the commonly used complex therapy vaginal tampons for 6-8 hours every day during 10-12 days; in case of clamidiosis and ureaplasmosis, it is advisable to repeat the local treatment in 1,5-2 months.

- The Urals and Perm Medical Academies highly estimated the effectiveness of Malavtilin usage in the combination with DENAS device in gynecology, ENT-pathology, in the treatment of therapeutic diseases, traumatology, stomatology, therapy.

- In the treatment of your feet in case of mycosis, it's enough to apply this cream 1-2 times a day during 3-7 days on the lesion focus.

- It's advisable to use this remedy in the management of festering wounds, bedsores, frostbites, burns, traumas, haematomas ('bruises'), abrasions. It has been proved that the treatment of skin wounds by the remedy enhances the process of recovery and prevents the second infection. Malavtilin removes muscle fatigue within 5-15 minutes.

- In stomatology (stomatitis, parodontosis, toothache, etc.) Malavtilin is creamed onto the skin in pain projection 1-2 times a day. In case of parodontosis, it's advisable to locally massage your gums 1-2 times a day during 2-3 minutes at a time.

At the same time Malavtilin is a perfect cosmetic remedy. It prevents our skin from getting older, reduces wrinkles on our face, enhances the recovery process of pustulous elements, improves the microcirculation, prevents scar formation and 'resolves' your current cicatricial changes. As a cosmetic remedy it must be applied to the clean wet skin 1-2 times a day by a thin layer. It can be constantly used, or as the makeup basis.

Especially high results are achieved by the combination of Malavtilin with DENAS device in the treatment of different diseases, and prophylaxis of their acute conditions, including the pathology of gastrointestinal tract organs, lungs and pleura diseases, kidneys, spine, joints and gynecology. The scars are resolved even in case of peritoneal commissures.

Malavtilin is applied to the skin 10-30 minutes before the DENS-therapy process. The course of the complex treatment includes 10-15 days. In case of chronic diseases it's recommended to have 3-4 courses a year, and in case of necessity the treatment can be continuously done during a long period of time. In periods between DENS therapy courses, Malavtilin can be constantly used.

Contra-indications: individual intolerance

Malavtilin is to be kept in a cool dark place (protected from the light).
